

Noid Light Set 6pc

The Noid test light set has been designed to provide an easy to use universal fit Noid light kit for testing automotive 12v actuator switching circuits like petrol injectors and ignition low tension (LT) switching.

Additional Information

- A bright, clear LED noid light for automotive electronic diagnostics.
- 4mm female "banana" type sockets allow the back probes to be used on any multi-meter leads equipped with 4mm male "banana" plugs.
- Easy fit fine back probe pins offer universal connectivity.
- Used to 'see' the switching of low tension circuits like petrol injectors, ignition LT circuits and relay switching circuits.
- Do not use on high voltage diesel injectors. Only connect in parallel; connection in series will result in damage to the Noid light.
