

Low Profile Truck Oil Drain

Low profile truck oil drain with rotary pump, suitable for oils, transmission fluids, coolant, diesel and other non-corrosive fluids. The 65 litre capacity drain reservoir unit is constructed from high-impact polyethylene, mounted on super-smooth 100mm nylon castors for easy manoeuvrability round the workshop with a low-profile design that fits under most HGVs and LGVs without jacking-up. The removable anti-splash screen prevents particles entering the reservoir and pump and there are storage spaces for oil filters and drain plugs at each corner. The rotary pump is simple to use and connects to a two-metre discharge pipe with hook-shape steel nozzle designed for fast, efficient emptying. A professional piece of kit, invaluable for clean, safe oil draining in the commercial vehicle workshop.

Additional Information

- Moulded high impact polyethylene reservoir with 2m discharge hose and hooked steel spout.
- Low profile (190mm) designed to fit under vehicles without jacking up.
- Smooth-roll nylon castors (100mm diameter) & pivoting T-handle (760mm long) for easy manoeuvrability.
- Capacity: 65L; overall size: 110 x 70cm; inset area: 75 x 50cm; depth: 19cm.
- Removable anti-splash screen prevents particles entering the tank and pump & storage space for oil filters & drain plugs.
