

DCT/DSG Removal and Insertion Kit

DCT/DSG twin plate dry clutches are now common place across the automotive car parc. Previously removal of these clutches required expensive, make-specific, specialist equipment. Laser tools have designed a removal and insertion solution that can be used across a greater range of vehicles including Hyundai/Kia, Renault and VAG.

Additional Information

- Modified 3 leg puller for easy extraction.
- Simple to use 2 leg cross beam style press frame.
- Specially designed press block with viewing slot to help avoid over pressing the clutch pack.
- For Volkswagen Group DSG selector set-up, please see Laser Part No. 7914.
- Made in Sheffield. IMPORTANT: ensure the force screw is well lubricated with molybdenum disulphide grease before use.
