

LTR Hub Cone Spanner Set 2pc

Badly adjusted or loose cone nuts can cause unnecessary wear and damage to both the wheel bearings and inner hub components. These super slim cone spanners allow for the cone nuts to be tightened hard up against the axle lock nuts so that they don't then come undone taking the hub bearings back out of adjustment. This set covers the 4 most popular sizes and are long enough to provide a good amount of leverage.

Additional Information

- Set of 2 double-ended cone spanners, with super slim profile to access wheel axle nuts for adjustment & maintenance.
- Fits sizes: 13, 14, 15, 16mm.
- Both spanners are identical, allowing for adjustments to be made on each of the hub.
- Manufactured from chrome plated steel.
