

Small Brake Disc Lip Removal Tool

The hard tool steel blade is designed to remove the sharp edges and corrosion that form on brake discs during use. Similar in use to the Laser Part No. 7839 but with narrower blade for better access to sliding faces of the brake caliper as well as the disc edges.

Additional Information

- An easy-to-use scraper with a hard wearing tungsten steel blade.
- For removal of corrosion and high points on brake components.
- Also ideal for gasket removal.
- Using the hex key supplied, the blade can be quickly rotated or removed for replacement.
- Due to the nature of the application, this item is considered consumable. Spares available: Replacement blade (Part No. 60036), scraper tool without blade (Part No. 60037). A larger brake disc lip removal tool with is also available, please see Part No. 7839.
