

Skipper Unit c/w Post & Base - Double Unit

Skipper's multifunctional, multi-surface range of innovative and patent protected products have been designed from the ground-up for health and safety. The Skipper system is designed to be completely modular, to allow for any of the safety kits and individual components to be connected to each other, enabling you to tailor the safety barriers precisely to suit the workspaces requirements. This kit comprises of; the Skipper head unit which features a 9m (30ft) retractable yellow and black barrier tape, with a unique design which prevents the tape from sagging or twisting even when extended over large distances. Two Skipper heavy duty support posts and bases, which can simply be filled with water or sand for improved strength and stability, then the post is twist-locked into position. Together with a dummy head unit, with no barrier tape, to use as the end point of a straight barrier set-up.
